

Robin Winters

Native iOS Development and Applied AI

San Francisco | robin@showflex.pro | <https://robin.ac/>

GitHub: <https://github.com/RobinWinters> | Codeberg: <https://codeberg.org/RobinWinters>

I build native iOS software and applied AI systems, with a focus on fitness technology. I am interested in iOS developer, Forward Deployed Engineer and fitness technology opportunities.

Technical Focus

Swift, SwiftUI, MapKit, Firebase, native iOS architecture, structured data pipelines, applied AI workflows and product delivery.

Work Experience

ShowFlex | iOS/Full Stack Engineer | 2024–present

- Swift and SwiftUI engineering, mobile architecture, product direction, interaction quality and beta release execution.
- MapKit event discovery, search and filtering, dynamic geocoding, detail sheets, and Firebase-backed ingestion of event, athlete, registration and media data.
- Prototype work on AI-assisted physique and posing feedback and predictive competition features.

Yukon Systems | Product Development Manager | 2023–2025

- Technical prioritization and cross-functional delivery of AI systems, software requirements, agent workflows and architecture tradeoffs involving reliability, explainability, latency and performance.

Organic Alkaloids | Co-owner | 2017–2023

- International import strategy, procurement, logistics, client relationships, marketing and financial management.

Public Work and Technical Writing

ShowFlex iPhone product: Apple lists version 17.0 with event map and calendar features. Product evidence: <https://apps.apple.com/us/app/showflex/id6757890910>

Distributed Kinematic Sensing and Exercise Intelligence, July 18, 2026: published architecture proposal across Apple devices and fitness frameworks; not a released sensing product.

Swift search request ownership, October 2, 2026: standalone educational package prepared with coding-assistant support. Seven tests passed on macOS with Swift 6.4. Code:
